Clin. Exp. Allergy 33:978-985(2003).
-!- FUNCTION: Invertase inhibitor (Potential).
-! SUBCELLULAR LOCATION: Secreted.
-!- TISSUE SPECIFICITY: Pollen and stem, but not leaves.
-!- ALLERGEN: Causes an allergic reaction in human.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  By similarity.

Novel high affinity integrin polypeptide useful for treating restenosis and parasitic diseases, comprises all or part of variant integrin alpha subunit A domain or variant integrin beta subunit A-like domain.

Claim 53; Page; 55pp; English.

The invention relates to a high affinity integrin polypeptide comprising all or part of a variant integrin alpha subunit A domain or a variant

```
CD11b alpha subunit A domain, where I at residue 332 has been replaced by G or A, F at residue 312 has been replaced by G or A at residue 310 have been replaced by C, or for determining if a dat residue 320 have been replaced by C, is useful for determining if a dat residue 320 have been replaced by C, is useful for determining if a date compound is a candidate compound for binding to CD11b or for treating an inflammatory disorder, by contacting a test compound with the polypeptide and determining if the test compound binds skeletal muscle injury, for treating disorders caused by ischaemia-tro purify variant integrin polypeptide ligands and parastic diseases, reperfusion injury, immune complexes, restenosis and parastic diseases, to purify variant integrin polypeptide ligands and as bait proteins in two-hybrid or three-hybrid assays. This sequence represents a human integrin alpha subunit Alpha 10 variant A domain. Note: This variant sequence is not featured in the specification but has been derived from the wild-type protein shown in AAU76853
                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    FRIKEEVVRAAKNLSRREGRETKTAQAIMVACTEGFSQSHGGRPEAARLLVVVTDGESHD 120

The invention relates to a high affinity integrin polypeptide comprising all or part of a variant integrin alpha subunit A domain or a variant integrin beta subunit A-like domain. The polypeptide, preferably the CD11b alpha subunit A domain, where I at residue 312 has been replaced by G or A, F at residue 313 and A at residue 320 have been replaced by C, or V at residue 315 and A at residue 320 have been replaced by C, or Or CD1b or for treating an inflammatory disorder, by contacting a test compound is a candidate compound for binding to CD1b or for treating an inflammatory disorder, by contacting a test compound with the polypeptide and determining if the test compound binds to the polypeptide. The integrin subunits a test useful for reducing skeletal muscle injury, for treating disorders caused by ischaemianer purity variant integrin polypeptide ligands and parasitic diseases, to purify variant integrin dolypeptide ligands and as bait proteins in two-bybrid or three-hybrid assays. This sequence represents the human integrin alpha subunit Alpha 10 A domain

The present sequence is that of the human integrin alpha 10 subunit A domain. This includes an invariant Ile residue. The invention features contain integrin alpha subunit polypeptides in which the invariant Ile is substituted by Gly, Ala or some other amino acid (e.g. Val) or is cableted. The polypeptide can include part or all of the A domain. Replacing the invariant Ile creates a variant integrin polypeptide that is southing the invariant Ile creates a variant integrin polypeptides) than the wild type form of the subunit. Variant integrin polypeptides of the invention are useful in assays for compounds that bind to a variant ligand, that interfere with or enhance the binding of an integrin ligand to integrin, and for identifying activation.

Specific ligands. They are also useful for generating antibodies, e.g. on integrin some such antibodies recognise an epitope that is either not present or not accessible on an integrin that is in a lower affinity of present or not accessible on an integrin that is in a lower affinity of conformation. The invention also provides methods of administering a variant integrin polypeptide, or an antibod, that selectivity binds it, to identify a ligand which binds to an active integrin. Such assays are useful for diagnosing inflammation, e.g. occult inflammation (e.g. useful for diagnosing inflammation, e.g. occult inflammation (e.g. babcess or an active arteriosclerotic lesion). Variant integrin containt integrin polypeptides.

Conformation also be used to affect the bioavailability of a variant integrin polypeptide und to creat disorders associated with a berrant or unwanted integrin expression or activity, such as vascular

```
The invention relates to a high affinity integrin polypeptide comprising all or part of a variant integrin alpha subunit A domain or a variant integrin alpha subunit A domain. The polypeptide, preferably the collib alpha subunit A domain, where I at residue 320 have been replaced by CC GO A, F at residue 313 and A at residue 320 have been replaced by CC GO A, F at residue 313 and A at residue 320 have been replaced by CC GO A, F at residue 313 and A at residue 320 have been replaced by CC GO A tetermining if a test compound is a candidate compound for binding to CC bloom of the the polypeptide and determining if the test compound binds to the polypeptide and determining if the test compound binds CC to the polypeptide. The integrin subunits are useful for reducing skeletal muscle injury, for treating disorders caused by ischaemia.

CC reperfusion injury, immune complexes, restences and parasitic diseases, to purify variant integrin polypeptide ligands and as bait proteins in CC two-hybrid ont these paraint. Alpha 11 variant A domain. Note: This variant integrin alpha subunit Alpha 11 variant A domain. Note: This variant complexes integrin alpha subunit Alpha 11 variant has been derived from the wild-type protein shown in AAU76854
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  142
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             82
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       9

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to a high affinity integrin polypeptide comprising all or part of a variant integrin alpha subunit A domain or a variant integrin beta subunit A-life domain. The polypeptide, preferably the coll be alpha subunit A domain, where I at residue 312 has been replaced by G or A, F at residue 313 and A at residue 320 have been replaced by C, or V at residue 315 and A at residue 320 have been replaced by C, or Or C determining if a test compound is a candidate compound for binding to compound with the polypeptide and determining if the test compound binds to the polypeptide. The integrin subunits are useful for reducing skeletal muscle injury, for treating disorders caused by ischaemian reperfusion injury, immune complexes, restenosis and parasitic diseases, to purify variant integrin polypeptide ligands and as bait proteins in two-hybrid or three-hybrid assays. This sequence represents the human integrin alpha subunit Alpha 11 A domain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            83 FRIKEEVVRAAKNLSRREGRETKTAQAIMVACTEGFSQSHGGRPEAARLLVVVTDGESHD 142
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    CQTYMDIVIVLDGSNSIXPWVEVQHFLINILKKFYIGPGQIQVGVVQYGEDVVHEFHLND 60
                                                                                                                                                                                                                                                                                                                                   Novel high affinity integrin polypeptide useful for treating restenosis and parasitic diseases, comprises all or part of variant integrin alpha subunit A domain or variant integrin beta subunit A-like domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 23 CPTYMDVVIVLDGSNSIYPWSEVQTFLRRLVGKLFIDPEQIQVGLVQYGESPVHEWSLGD

The present sequence is that of the human integrin alpha 11 subunit A domain. This includes an invariant Ile residue. The invention features covariant integrin alpha subunit polypeptides in which the invariant Ile is substituted by Gly, Ala or some other amino acid (e.g. Val) or is calested. The polypeptide can include part or all of the A domain. Comparing the invariant Ile creates a variant integrin polypeptide that is solution has a greater proportion of Ilgand. Comming polypeptides than the wild-type form of the subunit. Variant integrin polypeptides of the invention are useful in assays for compounds that integrin polypeptides of the invention are useful in assays for compounds that bind to a variant ligand, that interfere with or enhance the binding of an integrin ligand to integrin, and for identifying activation. Specific ligands. They are also useful for generating antibodies, e.g. concolonal antibodies, which bind to the high efficiency form of an integrin some such antibodies recognise an epitope that is either not present or not accessible on an integrin that is in a lower affinity of present or not accessible on an integrin that is an alower affinity conformation. The invention also provides methods of administering a variant integrin polypeptide, or an antibody that selectivity binds it, to identify a ligand which binds to an active integrin scheases or an active antegrin scheases or an active antegrin collection also be used to affect the bioavallability of a variant integrin polypeptide ligand and to treat disorders associated with a schear also.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ä
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    142

The present sequence is that of the human integrin alpha subunit CD49a A domain. This includes an invariant Ile residue. The invention features variant integrin alpha subunit polypeptides in which the invariant Ile is substituted by Gly, Ala or some other amino acid (e.g. val) or is deleted. The polypeptide can include part or all of the A domain. Replacing the invariant Ile creates a variant integrin polypeptide that is solution has a greater proportion of Ilgand. Corming polypeptides) than the wild-type form of the subunit. Variant integrin polypeptides of the invention are useful in assays for compounds that bind to a variant ligand to integrin, and for identifying activation-constitution in the subunit. Variant of an integrin ligand to integrin, and for identifying activation-conscional antibodies, which bind to the high efficiency form of an integrin some such antibodies recognise an epitope that is either not present or not accessible on an integrin that is in a lower affinity conformation. The invention also provides methods of administering a variant integrin polypeptide, or an antibody that selectivity binds it, to identify a ligand which binds to an active integrin. Such assays are useful for diagnosing inflammation, e.g. occult inflammation (e.g. albecess or an active integrin integrin integrin polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     polypeptides can also be used to affect the bioavailability of a variant integrin polypeptide ligand and to treat disorders associated with aberrant or unwanted integrin expression or activity, such as vascular

The present invention relates to novel antibodies that specifically bind to very late activation (VIA-1; betal containing integrins) antigens and entowers late activation (VIA-1; betal containing integrins) antigens and entowers of unitaring these antibodies to treat immunological disporders. The antibodies are useful for preventing or treating VIA-1- conditions (e.g. psoriatis, cezema, burns, dermatitis and abnormal problems; allergic rhinitis, respiratory distress syndrome, asthma, contificial conditions (e.g. inflammatory bowel disease, Crohn's disease, contestinal conditions (e.g. inflammatory bowel disease, Crohn's disease, crohn's disease, cascular diseases (e.g. atherosaclerosis), thyroditis, aplastic anaemia, containtentis nodosa, Hodgkin's disease, rheumatic fever, osteoarthritis, autoimmune diseases (e.g. type I diabetes, myasthenia gravis, rheumatoid arthritis, systemic lupus erythematosus and multiple sclerosis), renal fallure, sarcoidosis, nephrotic syndrome, Behcet's syndrome, gingivitis, olymyositis, hypersensitivity (e.g. delayed type hypersensitivity), graft and transplant rejections, graft confinedate hypersensitivity, graft and transplant rejections, graft confinedate hypersensitivity, graft and transplant rejections, myaner injury, myocardial ischaemia or endotoxin shock syndrome. The present sequence is the man it is domain protein. This sequence is used in the exemplification of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Rat; very late activation antigen; VLA-1; betal containing integrin; immunological disorder; inflammatory disorder; skin related condition; psoriasis; ezcame; burn; dermatitis; respiratory distress syndrome; fibrosis; allergic rhinitis; asthma; bronchitis; bursitis; bursitis; fever; migraine headache; inflammatory bowel disease; Crohn's disease; irritable bowel syndrome; colitis; colorectal cancer; vascular disease; atherosclerosis; thyroditis; aplastic anesmia; periarteritis nodosa; gastritis; Hodgkin's disease; rheumatic fever; autoimmune disease; osteoarthritis; type I diabetes; myasthenia gravis; rheumatoid arthritis; systemic lupus erythematosus; multiple sclerosis; nephrecit syndrome; renal failure; sarcoidosis; Behcet's syndrome; gingivitis; polymyositis; dypersensitivity; graft rejection; transplant rejection; conjunctivitis; graft versus host disease; myocardial ischaemia; alpha 1-I protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 85 TKEEVVRAAKNLSRREGRETKTAQAIMVACTEGFSQSHGGRPEAARLLVVVTDGESHDGE 144

The invention relates to a high affinity integrin polypeptide comprising all or part of a variant integrin alpha subunit A domain or a variant integrin beta subunit A-like domain. The polypeptide, preferably the CD11b alpha subunit A-like domain. The polypeptide, preferably the CD11b alpha subunit A domain, where I at residue 332 has been replaced by G or A, F at residue 313 and A at residue 320 have been replaced by C, or V at residue 315 and A at residue 320 have been replaced by C, or Or V at residue 315 and A at residue 320 have been replaced by C, is useful for determining if a test compound is a candidate compound for binding to the polypeptide and determining if the test compound binds to the polypeptide and determining if the test compound binds to the polypeptide. The integrin subunits are useful for reducing skeletal muscle injury, for treating disorders caused by ischaemianter polypeptide injury, immune complexes, restenosis and parasitic diseases, to purify variant integrin polypeptide ligands and as bait proteins in two-hybrid or three-hybrid assays. This sequence represents the human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            142
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   120
Human, integrin alpha subunit; A domain, CD49a, integrin beta subunit; A-like domain; inflammatory disorder; skeletal muscle injury; restenosis; ischaemia-reperfusion injury; immune complex; parasitic disease; Alpha 1; antiinflammatory; vasotropic; antiparasitic; vulnerary; gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Novel high affinity integrin polypeptide useful for treating restenosis and parasitic diseases, comprises all or part of variant integrin alpha subunit A domain or variant integrin beta subunit A-like domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          1 CSTQLDIVIVLDGSNSIYPWDSVTAFLNDLLKRMDIGPKQTQVGIVQYGENVTHEFNLNK

all or part of a variant integrin alpha subunit A domain or a variant integrin beta subunit A-like domain. The polypeptide, preferably the integrin beta subunit A-like domain. The polypeptide, preferably the collb alpha subunit A-like domain. The polypeptide preferably the collb alpha subunit A-like domain. The polypeptide been replaced by C, or var residue 315 and A at residue 320 have been replaced by C, or or collb or for treating an inflammatory disorder, by contacting a test compound to the polypeptide and determining if the test compound binds to the polypeptide. The integrin subunits are useful for reducing skeletal muscle injury, immune complexes, restences caused by ischaemiance to purify variant integrin polypeptide ligands and parasitic diseases, to purify variant integrin polypeptide all seaves. This sequence represents a human two-hybrid or three-hybrid assays. This sequence represents a human contactin alpha subunit Alpha 1 (CD498) variant A domain. Note This
                                                          Human; integrin alpha subunit; A domain; CD49a; integrin beta subunit; A-like domain; inflammatory disorder; skeletal muscle injury; restenosis; 1schaemia-reperfusion injury; immune complex; parasitic disease; mutant; antiinflammatory; vasotropic; antiparasitic; vulnerary; gene therapy;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to a high affinity integrin polypeptide comprising
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Novel high affinity integrin polypeptide useful for treating restenosis and parasitic diseases, comprises all or part of variant integrin alpha subunit A domain or variant integrin beta subunit A-like domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps

The present sequence is that of the human integrin alpha subunit CD49b A domain. This includes an invariant Ile residue. The invention features variant integrin alpha subunit polypeptides in which the invariant Ile is substituted by Gly, Ala or some other amino acid (e.g. Val) or is deleted. The polypeptide can include part or all of the A domain. Replacing the invariant Ile creates a variant integrin polypeptide that is solution has a greater proportion of Ilgand. Ferming polypeptides of the invention are useful in assays for compounds that bind to a variant ligand, that inteffere with or enhance the binding to fan integrin ligand to integrin, and for identifying activation. Specific ligands. They are also useful for generating antibodies, e.g. monoclonal antibodies which bind to the high efficiency form of an integrin. Some such antibodies recognise an epitope that is either not present or not accessible on an integrin that is in a lower affinity conformation. The invention also provides methods of administering a variant integrin polypeptide, or an antibody that selectivity binds it, to identify a ligand which binds to an active integrin. Such assays are useful for diagnosing inflammation, e.g. occult inflammation (e.g. abscess or an active arteriosclerotic lesion). Variant integrin

Ligand binding through I domains requires an intact metal ion-dependent adhesion site (MIDAS) motif. A MIDAS motif has been identified in the extracellular domain of a newly identified human anthrax toxin receptor (ATR). The invention provides ATR polypeptides (see ABPS4903.06) and polynucleotides (see ABPS4903.06) and knock-out animals. It also provides methods for identifying molecules that bind the ATR and which reduce the toxicity of anthrax toxin. A claimed method for treating anthrax in a human or animal involves administering an agent that inhibits binding between PA and ATR at a licvel effective to reduce the severity of anthrax. Suitable agents include ATR or a PA-binding fragment of ATR, a PA-binding polypeptide at least 80% identical to these, a fusion protein, a monoclonal or polyclonal antibody, a polysaccharide, a lipid or a nucleic acid

The invention relates to a high affinity integrin polypeptide comprising all or part of a variant integrin alpha subunit A domain or a variant integrin beta subunit A-like domain. The polypeptide, preferably the CD11b alpha subunit A domain, where I at residue 332 has been replaced by G or A, F at residue 313 and A at residue 320 have been replaced by C, or V at residue 315 and A at residue 320 have been replaced by C, or Got electmining If a test compound is a candidate compound for binding to CD11b or for treating an inflammatory disorder, by contacting a test compound with the polypeptide and determining If the test compound binds to the polypeptide. The integrin subunits are useful for reducing skeletal muscle injury, for treating disorders caused by ischaemia-reperfusion injury, immune complexes, restenosis and parasitic diseases, to purify variant integrin polypeptide ligands and as bait proteins in two-hybride or three-hybrid assays. This sequence represents the human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                   Human, integrin alpha subunit, A domain, CD49b; integrin beta subunit; A Like domain; inflammatory disorder; skeletal muscle injury; restenosis; ischaemia-reperfusion injury; immune complex; parasitic disease; Alpha 2; antiinflammatory; vasotropic; antiparasitic; vulnerary; gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Novel high affinity integrin polypeptide useful for treating restenosis and parasitic diseases, comprises all or part of variant integrin alpha subunit A domain or variant integrin beta subunit A-like domain.

Sequence 21325, Application US/09252991A
Patent No. 6551795
GENERAL INFORMATION:
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS
TITLE OF INVENTION: AERGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
FILE REFERENCE: 107196-1136
CURRENT FILING DATE: 1999-02-18
PRIOR APPLICATION NUMBER: US 60/074,788
PRIOR APPLICATION NUMBER: US 60/074,788
PRIOR PAPLICATION NUMBER: US 60/094,190
PRIOR PLING DATE: 1998-02-18
PRIOR PELING DATE: 1998-02-18
PRIOR PELING DATE: 1998-02-18
PRIOR FILING DATE: 1998-02-18
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             N: 18232, A NOVEL DUAL SPECIFICITY PHOSPHATASE AND USES THEREFOR 10448-018001

Sequence 29795, Application US/09252991A

Patent No. 6551795

GENERAL INFORMATION:
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS:
TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS

TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS

CURRENT APPLICATION NUMBER: US/09/252,991A

CURRENT PILING DATE: 1999-02-18

PRIOR APPLICATION NUMBER: US 60/074,788

PRIOR PILING DATE: 1998-02-18

PRIOR FILING DATE: 1998-02-18

PRIOR FILING DATE: 1998-07-27

NUMBER OF SEQ ID NOS: 33142

SEQ ID NO 29795

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
